

High capacity (1000w) power supply unit for multiple rotators

Description

Model: SPID SP01 Rotator Controller via Ethernet - OUT OF STOCK

The PS-01 power supply is suitable for the Big RAS/RAK & HR with the MD-01 control unit. The power supply provides 2 different voltages (15V for the controller / 24V for the rotator). At this power supply, due to the generous dimensions of the output power (1000W), may also be more like 1 controller/rotator operated.

The power supply has several protection circuits. Among other factors, a temperature of 50° starts additional fans for optimum cooling. A protection circuit against over-voltage is also integrated. The power supply unit is supplied complete with connectors.
